Objective

Highly motivated DevOps Engineer, transitioning from a background in digital design and embedded systems, with comprehensive training in modern cloud-native technologies. Seeking to leverage hands-on expertise with Docker, Kubernetes, Terraform, Ansible, and Jenkins to design, automate, and manage robust CI/CD pipelines and cloud infrastructure. Aims to contribute to a dynamic team, solve complex system challenges, and support the full software development lifecycle.

Education

Bachelor of Engineering, Electronics and Communication Department

(Oct 2020 – Jul 2025)

Experience & Internships

Education For Employment-Egypt & Senior Steps Academy

DevOps Intern: Selected for an intensive, hands-on DevOps scholarship program focusing on end-to-end infrastructure automation and cloud technologies.

(Oct 2025 - Dec 2025)

- Automated server provisioning and configuration management using **Ansible** and **Linux/Bash** scripting.
- Provisioned scalable cloud infrastructure on **AWS** (EC2, S3, VPC) using **Terraform** as Infrastructure as Code (IaC).
- Designed and implemented CI/CD pipelines using **Jenkins**, **GitHub Actions**, and **ArgoCD** for automated deployment.
- Containerized applications using **Docker** and orchestrated deployments via **Kubernetes** and **OpenShift**.
- Configured monitoring dashboards using **Prometheus** and **Grafana** to ensure system observability.

STMicroelectronics

(Jul – Sep 2024)

Digital Design & Verification Intern

- Developed a pipelined MIPS processor with a branch prediction unit and hazard detection unit.
- Designed Coprocessor0 for exception handling and system-level control.
- Integrated the processor with SoC peripherals using AMBA AHB and APB interfaces.
- Verified the design on an FPGA platform to ensure optimal performance.

IEEE ASUSB

Digital Verification Team Member

- Instructed youth (ages 19–23) in digital verification topics: simulation tools, UVM, DSP/formal verification.
- Maintained session quality, mentored new members, and handled team recruitment.
- Developed curriculum materials and session plans.

Systel Telecom

(Jun – Jul 2023)

Telecom Intern

- Gained practical exposure to fiber optics, CCTV, microwave, and broadband communication systems.
- Participated in workshops on public safety communications.

Information Technology Institute (ITI)

(Aug – Sep 2023)

Embedded Systems Intern

- Completed 162-hour hands-on training in AVR and embedded systems.
- Developed skills in C programming, hardware interfacing, and software testing methodologies.

Projects

- **Multi-Tier App Deployment on AWS via Terraform**

Technologies: Terraform, AWS (EC2, VPC, Security Groups, S3), Git, Remote Backend

- Orchestrated AWS cloud resources (Compute, Networking, Security) using Terraform declarative code to create a reproducible infrastructure.
- Managed Infrastructure State (tfstate) securely using remote backends (S3 DynamoDB) to enable team collaboration and state locking.
- Secured the infrastructure by defining granular ingress/egress rules in Security Groups and handling credentials via variables.

- **Multi-Tier Java App Deployment On-premise using vagrant**

Technologies: Vagrant, Shell Scripting, Nginx, Tomcat, MySQL, RabbitMQ

- Orchestrated a complex multi-tier application stack across clustered Virtual Machines using **Vagrant (IaC)**.
- Developed **Bash scripts** to automate the installation and configuration of Database, Caching, Messaging, and Web layers.
- Established internal private networking and service integration between heterogeneous OS environments (CentOS & Ubuntu).

- **Multi-Tier Application with Docker Compose**

Technologies: Docker Compose, Nginx, Apache Tomcat, MySQL, Memcached, RabbitMQ

- Orchestrated a fully containerized, production-ready multi-tier web application using **Docker Compose**, implementing modern microservices principles.
- Configured and integrated a comprehensive stack: **NGINX** (Reverse Proxy), **Tomcat** (App Server), **MySQL** (DB), **Memcached** (Caching), and **RabbitMQ** (Broker).
- Established persistent data storage using **Docker Volumes** and optimized service communication within a secure internal network.

- **AXI4 Memory-Mapped Slave verification:** Built a compact SystemVerilog class-based testbench for an AXI4 slave + 4 KB RAM, featuring randomized burst stimulus, 4 KB-boundary/alignment checks, SVA assertions, functional coverage, and a golden-model scoreboard—achieving 100% protocol and code coverage.

Courses

- **Digital Design Using Verilog and FPGA Flow using Vivado:** FSM, verification with testbenches, FPGA architecture.
- **Signal processing problem, solved in MATLAB and in Python:** Practical experience in digital filter design, FFT, denoising, and signal analysis using MATLAB and Python.
- **Networking Fundamentals (CCNA 200-301):** Covered networking Fundamentals including subnetting, routing protocols, VLANs, NAT, ACLs, and security basics.
- **Linux Administration I & II (Red Hat):** Gained practical skills in user management, shell scripting, services configuration, network setup, and system security.
- **System Administration:** Comprehensive training in system configuration, server deployment, backup, monitoring.

Technical Skills

Cloud & IaC: AWS (EC2, S3, VPC, IAM), Terraform, vagrant

Containerization: Docker, Kubernetes (K8s), OpenShift

Configuration Management: Ansible

CI/CD & Version Control: Jenkins, Git, GitHub, GitLab

Monitoring: Prometheus, Grafana

Scripting & Languages: Python, Bash / Shell Scripting

Operating Systems: Linux (Ubuntu), Nginx, Tomcat

Databases: MySQL

Tools: VMware vSphere, VMware ESXi, VMware NSX, vCenter Server, Cisco Packet Tracer, Wireshark, mobaextern.

Concepts: Network Troubleshooting, Automation & Configuration Management, Monitoring, Network Simulation, Advanced routing protocols: BGP, OSPF, Switching technologies: STP, EtherChannel, VXLAN, cloud: VPCs, subnets, peering, NAT gateways.
